SUMMARY

Strategic and user-centric Software Developer with a background in engineering scalable web applications and high-end digital platforms. Proven expertise in bridging the gap between cinematic UI/UX design and robust backend infrastructure, with specialized experience in Next.js, MongoDB, and fintech integrations. Committed to delivering measurable technical improvements, including a 40% reduction in page load times and seamless currency transaction systems. Highly adaptable, with a unique analytical perspective gained from global supply chain quality management.

WORK EXPERIENCE

Lead Full Stack Developer (Project-Based)	nairesmedia.com & frznsociety.net January 2024 – Present
• Architected a luxury real estate digital platform (Naires Media) using Next.js, optimizing for 4K cinematic video rendering and SEO, resulting in rapid page loads for high-resolution galleries. • Engineered a custom booking engine integrated with MongoDB, enabling real-time equipment logistics and shoot scheduling for elite developers. • Developed a Music production platform for Artists (FrznSociety), maintaining a "Sound board" aesthetic while implementing a scalable NoSQL schema to manage growing member profiles. • Integrated fintech solutions via Eversend and M-Pesa, facilitating secure multi-currency transactions and streamlined digital commerce. • Automated client engagement by implementing Email.js for instant lead notifications and inquiry routing, reducing response latency.	
Quality Expert / Cold-Chain Analyst	FlowerWatch B.V. (Contract) December 2025 – March 2026
• Managed global cold-chain quality standards using Tive and WatchIT IoT platforms to track real-time shipment data and mitigate temperature deviations. • Translated complex sensor data into actionable insights for international stakeholders, reducing waste and ensuring compliance with global phytosanitary requirements. • Conducted rigorous farm audits and generated technical reports to optimize post-harvest processes and international vase-life standards.	
Handyman & Surveyor	Michael Bluebell Company August 2025 – November 2025
• Assisted in conducting accurate site surveys and measurements to support large-scale construction planning and layout. • Collaborated closely with engineers and foremen to ensure safety compliance and quality control across various building projects.	

EDUCATION

Moringa school

Professional Certificate in Software Engineering (Full-Stack Specialization)January 2024 – July 2024

- Intensive Residency: Completed an 800+ hour immersive program focused on the full software development life cycle (SDLC), from initial system design to cloud deployment.
- Engineering Principles: Mastered Data Structures, Algorithms, and Object-Oriented Programming (OOP) using Python/FastAPI and JavaScript/React.
- Database Architecture: Designed and implemented relational database schemas using PostgreSQL and SQLAlchemy, focusing on normalization and data integrity.
- Frontend Optimization: Specialized in modern UI frameworks (Next.js), implementing Server-Side Rendering (SSR) to achieve a 40% improvement in performance metrics for media-heavy platforms.
- Agile Collaboration: Worked in cross-functional teams using Git/GitHub for version control, conducting peer code reviews, and managing sprints within a fast-paced, deadline-driven environment.

PROJECTS

Marketplace Strategy: Soko La Wanafunzi | Lead Developer

- Developed a refurbished goods marketplace specifically for the campus student demographic.
- Implemented a user-to-user verification system and optimized the UI for mobile-first accessibility, leading to a successful launch on the student network.

Developer Mentorship Platform: DevConnect | UI/UX & Frontend

- Designed and built a comprehensive mentorship platform using Framer and React.
- Focused on high-speed performance and intuitive user flows to facilitate real-world development workflows.

SKILLS

- Development & Strategy: Full Stack Development, UI/UX Design (Figma/Framer), Web Architecture, Business Transformation, Agile Methodologies, Solution Design.
- Technical Proficiency: Next.js, React, FastAPI, Node.js, MongoDB, PostgreSQL, Firebase, Git/GitHub, Server-Side Rendering (SSR).
- Analysis & Research: Data Analysis, IoT Monitoring, Cold-Chain Logistics, Technical Auditing, Market Research, Performance Metrics.
- Fintech & Integration: M-Pesa Integration, Eversend API, Email.js Automation, OAuth/JWT Authentication, Database Management (SQLAlchemy).

ADDITIONAL INFORMATION

I graduated from moringa school with a certificate in software engineering in the month of july 11th 2025 . I have worked on various projects most of them being my own and a fewer part having worked with colleagues, of them being “nairesmedia.com and frznsociety.net” which can be found on my linkedin account. My hobbies are reading, which has helped sharpened my literature and communication skills, and other hobbies which are quite the catch.
